GENERAL INFORMATION:

TITLE OF INVENTION: RECOMBINANT HUMAN ALPHA-FETOPROTEIN AS

TITLE OF INVENTION: AN IMMUNOSUPPRESSIVE AGENT

FILE REFERENCE: 06727/005002

CURRENT FILLG DATE: 1998-11-05

SARLIER FILLING DATE: 1998-11-05

EARLIER PELLING DATE: 1995-01-24

NUMBER OF SEQ ID NOS: 16

SEQ ID NO 3: SEQ ID NOS: 16

SEQ ID NO 3: LENGTH: 197
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3, Application US/08377309A

Sequence 6, Application US/08377309A
Patent No. 595528
GENERAL INFORMATION:
TITLE OF INVENTION: RECOMBINANT HUMAN ALPHA-FETOPROTEIN AS
TITLE OF INVENTION: AN IMMUNSUPPRESSIVE AGENT
FILE REFERENCE: 06727/005001
CURRENT FILING DATE: 1995-01-24
NUMBER OF SEQ ID NOS: 16
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 6, Application US/09186723

Patent No. 6288034

Patent No. 5965528
GENERAL INFORMATION:
APPLICANT: MICHIGATION:
APPLICANT: MICHIGATION:
APPLICANT: MICHIGAN:
TITLE OF INVENTION: RECOMBINANT HUMAN ALPHA-FETOPROTEIN AS
TITLE OF INVENTION: AN IMMUNOSUPPRESSIVE AGENT
FILE REFERENCE: 06727/005001
CURRENT APPLICATION NUMBER: US/08/377,309A
CURRENT FILING DATE: 1999-01-24
NUMBER OF SEQ ID NOS: 16
SOFTWARE: FASTSEQ for Windows Version 3.0
               COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION NATA:
APPLICATION NUMBER: PCT/US96/00996
FILING DATE: 24-JAN-1996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 32; DB 2;

                                                                                                                                                                                                                                                                                                                conditions, equiences ABAN0925-ABAN0954 represent nucleic acids encoding them. The lawention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the movel polypeptides, and percent of the invention, methods of producing the navel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides of the invention. Although novel, many of the bill of polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may differentiation activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activities; and hence correctly activity; itssue growth activity; contractly activity; activity; tissue growth activities; confinentation activities; themostatic thrombolytic activities; themostatic, thrombolytic activities; activities; hemostatic, thrombolytic activities; activities; hemostatic, thrombolytic activities; activities; paemostatic, thrombolytic activities; and activities; concer cell proliferation or metastasis.

Conditions, e.g., by protein or ligand activities; or may be invention are useful for preventing, treating or amplicating medical conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or preventing, treating or amplicating disease, are useful for preventing, treating or amplicating disease, are useful for preventing, the immunoactic conditions activities may be used to promote wound repair (or nucleic acids encoding them) may be used to promote wound repair (or nucleic acids encoding them) may be used in cell cultures to surnate by an encoder to meuraphy and the reample, such polypeptides may be used in the treatment of viral, and the and tungal infections in addition to immune disorders.

Compute part cell growth factor activity may be used to neuroper per per cell surnary and prov
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ó:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                    Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and

Human secreted proteins AAB75506 - AAB75554 are encoded by polynucleotide sequences AAF64176 - AAF6424. The specification includes amino acid sequences AAB75555 - AAB75066 which represent fragments of the human secreted proteins, and protein sequences with which they share homology. The proteins and polynucleotides, their agonists and antagonists have activities dependent on the tissues and cells in which they are expressed, examples of these activities include, immunosuppressive; antiarthritic antirheumatic; antiproliferative; cytostatic; cardiant; and sactivities include; immunosuppressive; correspondentive; notropic; cerebroprotective; notropic; neuroprotective; antibacterial; virucide; fungicide; opthalmalogical; and vulnerary. The proteins, colynucleotides, agonists and antagonists can be used to treat or detect or diagnose various diseases and disorders including, autofimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders of e.g. cardiac arthritis, hyperproliferative disorders arthritis and all and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin ageing due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Included in the invention are polynucleotide sequences AAF64167 - AAF64175 and peptide AAB75505 which are used in the isolation, identification and characterisation of the proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The present sequence represents the mouse CGICE protein. When the CGICE gene is mutated it is responsible for Best's macular dystrophy (BMD). Polynucleotides encoding CGICE are useful for dagnosating whether a patient carries a mutation in the CGICE gene. Normal and mutated CGICE proteins are useful for identifying activators and/or inhibitors of these proteins, in order to treat BMD. The CGICE gene offers a simpler and cheaper method of diagnosing BMD without the need for the presence of the patient. The gene may also be useful to discovering the genetic cause of age-related macular dystrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymeratase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful in medical clasorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasorders for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cand on acid sequences. ABG0010-ABG30377 represent novel human cald sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   carly the Annealow encode the numen immunes/incemacuptetto antityen (1) carly style and can be used in gene therapy and vaccine production. (1) cactivity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expression in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK4942 to AAK87690 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; antibacterial; gene therapy; neural; immune; reproductive; renal; gastrointestinal; pulmonary; cardiovascular; proliferative disorder;

                         proteins, called prostate cancer antigens, given in AAB5363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletion in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
AAF15566 to AAF16505 encode the human prostate cancer associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           colon cancer; colon cancer antigen; diagnosis; detection;

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammatopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or

The present invention describes primer sets for synthesising 5602

[ull-length cDNAs defined in the specification. Where a primer set
comprises: (a) an oligo-dT primer and an oligonucleotide complementary
to the complementary strand of a polynucleotide which comprises one of
the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
polynucleotide which comprises a 1'-end sequence, where the
coligonucleotide which comprises at least 15 nucleotides and the compination of
the 5'-end sequence, 3'-end sequence 15'-end 16'-end 16'-e
                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; primer; detection; diagnosis; antisense therapy; gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Yamamoto J;

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length coNas. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length coNas. The primers allow obtaining of the full-length coNas asaily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13622 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or .0) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to the polynucleotide which comprises a 3'-end sequence complementary to opplynucleotide which comprises a 3'-end sequence complementary to a polynucleotide comprises a 3'-end sequence.
represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full-length CDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs of

```

```
The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (I) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II).

(I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) and the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic biology, a process hampered by the complexity of the parasitic biology, a process hampered by the resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not

   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
csupplement the patients own production of (I). Additionally, (I)
concletion and polynucleotides may be used to protect the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
co AAK87694 represent inwention. AAK54942 to AAK84950 and AAM82169
crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

```
amino acid sequences given in AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting polynucleotides may be used to produce the secreted (I), by inserting the nection and polynucleotides may be used to produce the secreted (I), by inserting concers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/hamatopoietic antigen genomic sequences from the present invention. AAK84950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                                                                                                                                                                                                                                                         q
                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                             with cytostatic, virucidal, immunomodulatory, antiinflammatory and haemostatic activity. The protein and encoding polynucleotide are used in diagnosis and treatment of malignant tumour, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and various inflammations. The polynucleotide is useful in gene therapy.
                                                                                      Human phosphatidic acid phosphatase 2-12 and encoded polynucleotide, used in diagnosis and treatment of malignant tumours, haemopathy, human immunodeficiency virus infection, immunological diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome
                                                                                                                                                                                 The invention relates to the human phosphatidic acid phosphatase 2-12
                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human: chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) is useful in gene therapy techniques to restore normal activity of (II) is useful in the subject of (II) and (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other trails to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human can appear in the printed specification, but was obtained in electronic format directly from WIPO

A TUMOR SUPPRESSOR.

-!- SUBCELLULAR LOCATION: NUCLEAR (BY SIMILARITY).

-!- ALTERNATIVE PRODUCTS: 2 ISOPORMS; 1 (SHOWN HERE) AND 2; ARE
PRODUCED BY ALTERNATIVE SPLICING.

-!- TISSUE SPECIFICITY: IN THE ADULT, WIDELY EXPRESSED WITH HIGHEST

LEVELS IN THYMUS AND TESTIS. EXPRESSED THROUGHOUT THE WHOLE EMBRYO
AT ALL STAGES OF DEVELOPMENT EXAMINED. AT DAY 10, HIGHEST

EXPRESSION IS FOUND IN THE YOLK SAC WHILE AT DAY 16 AND 18, HIGHER

LEVELS ARE FOUND IN INDER COMPARTMENTS OF BONE.

-!- DEVELOPMENTAL STAGE: IN THE EMBRYO, HIGHEST EXPRESSION OF ISOFORM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQUENCE FROM N.A., AND CHARACTERIZATION.

"Site-directed mutagenesis of cysteine residues in biliverdin
reductase. Roles in substrate and cofactor binding.";

Eur. J. Biochem. 222:597-603(1994).

-! FUNCTION: CONVERTS BILIVERBIN TO BILIRUBIN: DISPLAYS TWO DISTINCT
PH OPTIMA USING A DIFFERENT COFACTOR AT EACH PH: NADH AT THE LOWER
PH 6.7-6.9 RANGE AND NADHP AT PH 8.5-8.7. NADPH, HOWEVER, IS THE
PROBABLE COFACTOR IN BIOLOGICAL SYSTEMS.
-! CATALYTIC ACTIVITY: Bilirubin + NAD(P)(+) = biliverdin + NAD(P)H.
-!- COFACTOR: BINDS ONE ZINC ION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rattus norvegicus (Rat).

MI204, a novel 2',5' oligoadenylate synthetase with a ubiquitin-like

extension, is induced during maturation of murine dendritic cells.";

L. Timunol. 163:760-765(1999).

C. I- FUNCTION. MAY PLAY A ROLE IN MEDIATING RESISTANCE TO VIRUS

INPECTION, CONTROL OF CELL GROWNT, DIFFERENTIATION, AND APOPTOSIS.

C. I- CATALYTIC ACTIVITY: BINDS DOUBLE-STRANDED RNA AND POLYMERIZES ATP

INTO PPPR(A2'P5'A)N OLIGOMERS, WHICH ACTIVATE THE LATENT RNASE L.

THAT, WHEN ACTIVATED, CLEAVES SINGLE-STRANDED RNAS.

C. I- TISSUE SPECIFICITY: STRONGLY EXPRESSED IN SPLEEN DENDRITIC CELLS,

WHEREAS, IN BONE MARROW-DERIVED DENDRITIC CELLS,

WHEREAS. IN BONE MARROW-DERIVED DENDRITIC CELLS,

THE HIGHEST LEVELS BEING IN THYMUS, LUNG, AND BONE MARROW.

C. I- SIMILARITY: BELONGS TO THE 2-5A SYNTHETASE FAMILY.

C. I- SIMILARITY: BELONGS THE TRUE ORTHOLOG OF HUMAN OASL.

                                                                                                                                             "Structural organization of the genes encoding human and murine FKS06-binding protein (FKBP) 13 and comparison to FKBPI."; FKS06-binding protein (FKBP) 13 and comparison to FKBPI."; Gene 134:271-275(1993).
-!- FUNCTION: PPIasses accelerate the folding of proteins. May function as a component of membrane cytoskeletal scaffols.
-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-AUG-1992 (Rel. 23, Created)

-!- FUNCTION: REP HELICASE IS A SINGLE-STRANDED DNA-DEPENDENT ATPASE INVOLVED IN DNA REPLICATION; IT CAN INITIATE UNWINDING AT A NICK IN THE DNA. IT BINDS TO THE SINGLE-STRANDED DNA AND ACTS IN A PROGRESSIVE FASHION ALONG THE DNA IN THE 3' TO 5' DIRECTION (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE HELICASE FAMILY. UVRD SUBFAMILY.
